---

Recovered approximately 22,000 gallons of liquids, of which approximately 12,000 gallons is fuel/water and 10,000 gallons mostly water. Also excavated and loaded approximately 600 cubic yards of soil/sediment into roll off boxes, transportation and disposal pending. Wolverine obtained disposal approval from a landfill and expects to begin disposal tomorrow.

Hi Mark,

I'm putting together some reporting metrics on the Wolverine Pipeline Release. Do you have an updated estimate on how many gallons of product as well as product/water mix they've recovered? Do you know how many cubic yards of sediment they've removed so far?

Thank you,

Kristina Behnke
